

Dear FCC,I am a subscriber to XM Satelitte Radio, I pay for this service and find it extremely valuable especially as to weather and traffic. Being a Florida resident and a sales person who relies on my vehicle for work. I need INSTANT access to traffic and weather conditions on a moment's notice. It helps protect my safety and also allows me to alert my loved ones and associates of impending weather and or traffic situations. Florida has violent storms that can erupt in a very short time, I need to be able to react to these events. Any weather authority will confirm that seconds can save lives, especially in Tornado prone areas of our country. Does the NAB want the blood of potential victims on their hands if this petition passes?

I push one button on my radio to get this info. I don't have to sit there and scan, search and wait for commercials to end and hope I get this info. It causes me to be distracted while driving and can cause harm to myself and other drivers around me.

I resent the NAB from trying to tell me what I can listen to, and when. It's all about dollars to them period.

Please REJECT NAB's petition 04-160 ,and continue to protect our choices and safety.
